

Training | How to access supercomputing and AI resources for research, companies and institutions

From the X4HPC and CLARIAH-CAT transfer networks we organise a **joint training session on how to access supercomputing and AI resources**.

 **Date:** Tuesday, July 7, 2026  **Time:** from 3:30 pm to 5:00 pm  **Format:** online / in-person – in the Auditorium of the Barcelona Supercomputing Center

Who is it aimed at?

- **Researchers** who want to access supercomputing resources through the calls of the **RES** (Red Española de Supercomputación) and **EuroHPC**.
- **Spin-offs and companies** that are part of R&D&I networks that want to explore access to advanced computational resources through the [BSC AI Factory](#), the BSC's European initiative to bring supercomputing and AI closer to the European business and innovation fabric.
- **Public institutions and organizations** interested in the services that the [BSC AI Factory](#) can provide them.

Why can't you miss this session?

The people who will provide the training **are closely linked to the ecosystem of access calls** and have in-depth knowledge of how these processes work. This gives you an excellent opportunity to:

- Understand first-hand how access processes work.
- Get practical advice to prepare a successful application.
- Meet other groups and companies with similar challenges to generate synergies.

It is the ideal time to share your needs and resolve doubts directly with the experts.

Limited spots. We encourage you to register before July 1st through this [link](#).

The training will be given in **Catalan**.

For any questions, you can contact us at x4hpc@bsc.es.
